Soybeans

Graph-Ex SA™ may be applied to seed using two methods of application, bulk or planter box.

BULK APPLICATION: Apply one half (0.5) ounce by weight (one measuring cup as provided) per 140k seed, by manually or mechanically dispersing Graph-Ex SA™ into a flowing stream of seed. Ensure that Graph-Ex SA™ is evenly dispersed in the planter or drill box.

PLANTER BOX APPLICATION: Apply one half (0.5) ounce by weight (one measuring cup as provided) per 140k seed into planter or drill box. Mix seed until uniform coverage is obtained. It is best to treat and mix seed in 140k increments.

For optimal performance, plant seed within 72 hours of application. DO NOT EXCEED 72 HOURS without re-inoculating seed. For current "planting window" recommendations, and the latest seed treatment compatibility information please contact your ABM representative, go to www.ABM1st.com or call ABM at 877-617-2461.

ADVERSE CONDITIONS/VIRGIN SOYBEAN LANDS: When any of these conditions are present, ABM highly recommends at least a double (2x) rate of inoculants. ABI Sterile Peat is highly recommended to be used as a second inoculant to achieve at least a double rate; • Soil has not hosted the specific legume for more than three (3) years • Soil pH is less than 5.8 (the pH should be adjusted by liming prior to inoculation) • Soil pH is more than 8.5 • Organic matter is less than 1.5 • Drought or flooding has occurred • Topsoil exceeds 80° F • Soil erosion • Use of soil treatments and chemicals injurious to soil bacteria and inoculants.

STORAGE INSTRUCTIONS: Store package in a cool place, and keep closed until use. Use inoculant before expiration date and only use on specified legume seed. Protect inoculant and inoculated seed from direct sun and high temperatures. Store below 77° F
